

GHANA MANGANESE COMPANY

A stylized silhouette illustration of a mining operation at dusk or dawn. The scene includes an excavator on the left, a large processing machine with a circular saw in the center, a conveyor belt system, and a dump truck on the right. The background shows rolling hills under a gradient sky from dark blue to light orange.

GMC Site Access

Digital Workflow Management System for Site Access Registration

Ghana Manganese Company **June 2026**

Project Overview

GMC Site Access is a web-based system that digitises the registration of foreign visitors and expatriates seeking access to Ghana Manganese Company sites.

It replaces fragmented paper forms and email approvals with a single, secure and fully trackable digital workflow.

Web-based & centralised

One platform, accessible to every department

Visitor & expatriate ready

Purpose-built for foreign site-access requests

Secure & auditable

Every action is tracked and recorded

The Problem

Today's manual, paper-based process spans multiple departments with no central oversight.

01 Manual & fragmented

Paper forms hand-carried across several departments.

02 No tracking

No way to see where a request is or who is holding it.

03 Lost approvals

Sign-offs buried in unread or forwarded emails.

04 No audit trail

No reliable record of who approved what, and when.

05 Weak revocation

Access is rarely withdrawn formally when no longer needed.

The Solution

GMC Site Access brings the whole process into one secure digital system.

1

Central digital system

A single source of truth for every registration.

2

Automated notifications

Stakeholders are alerted at each step.

3

Full audit trail

Every submission and approval is logged and timestamped.

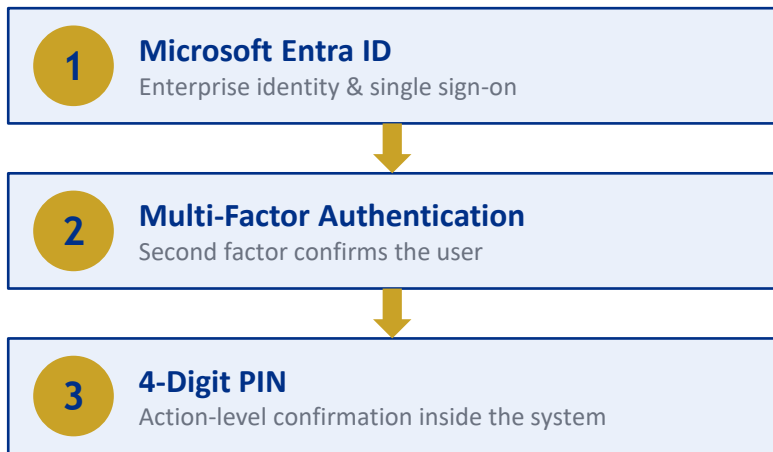

4

Role-based access

The right people get the right permissions, only.

System Architecture & Security

Dual-Layer Authentication

Role-Based Access Control

Permissions are tied to a user's role — people see and do only what their role allows.

System Administrator

Admin

Guest

User

User Roles

System roles define what each account can configure and control.

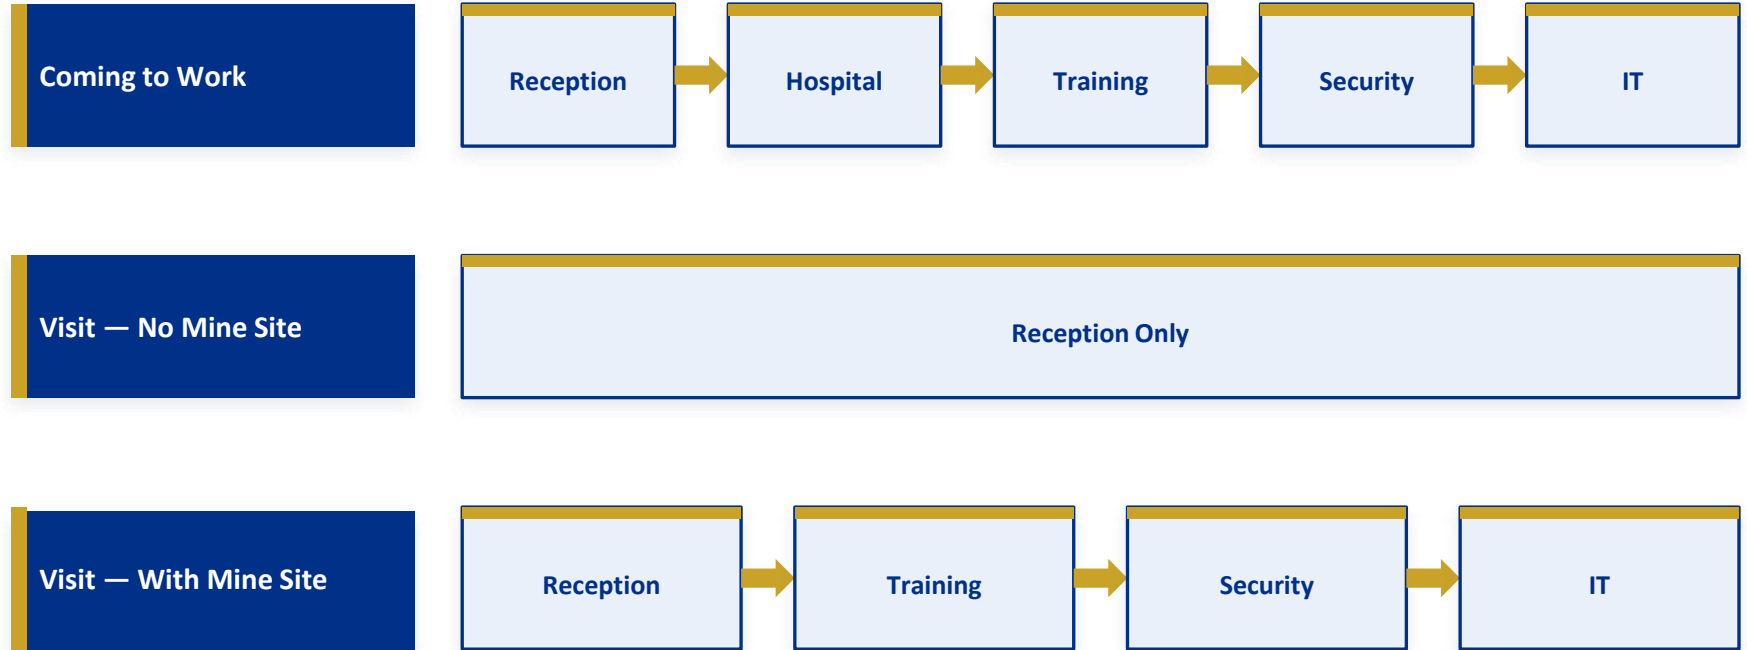

System Role	Description & Access
System Administrator	Full system control — configuration, user management and audit oversight.
Admin	Manages registrations, approvals and departmental workflows.
Guest	Limited, time-bound access granted to external visitors.
User	Standard access to submit and track their own registrations.

Workflow Roles

Workflow roles carry out and approve each stage of a site-access request.

Workflow Role	Responsibility
Receptionist	Initiates the registration and routes the visitor to the correct path.
HCM / GMM / DMD	Stakeholder review and approval authority.
Hospital Records	Medical screening and fitness clearance.
Training School	Safety induction and certification.
Security	Identity verification and access authorisation.
IT	Account provisioning and access activation.

Workflow Paths

Reception

Reception

STEP 1 OF 5

Position in the access chain

Responsibilities

- First point of contact for foreign visitors and expatriates
- Captures personal, company and visit details in the digital form
- Uploads supporting documents (passport, permits, invitation)
- Selects the visit type to trigger the correct workflow path

Handoff Rules

- “Coming to work” → forwarded to Hospital for medical clearance
- “Visit with mine site” → forwarded to Training
- “Visit, no mine site” → completed and closed at Reception

Hospital

Hospital

STEP 2 OF 5

Position in the access chain

Responsibilities

- Conducts pre-employment and fitness medical screening
- Records the medical clearance status in the system
- Attaches medical certificates to the visitor record
- Flags any restrictions that affect site access

Handoff Rules

- On clearance → forwarded to the Training School
- On failure → returned to Reception with reason; access withheld

Training School

Training School

STEP 3 OF 5

Position in the access chain

Responsibilities

- Delivers mandatory site safety induction
- Records induction completion and validity dates
- Issues a training reference / certificate number

Handoff Rules

- On completion → forwarded to Security
- Incomplete induction blocks progression to Security

Security

STEP 4 OF 5

Position in the access chain

Responsibilities

- Verifies identity and confirms all completed clearances
- Issues access credentials and gate authorisation
- Enforces site entry rules and permitted zones

Handoff Rules

- On verification → forwarded to IT for system access
- Discrepancies are returned to the originating layer

Information Technology

Information Technology

STEP 5 OF 5

Position in the access chain

Responsibilities

- Provisions system and network accounts where required
- Assigns role-based permissions and the 4-digit PIN
- Finalises and activates the access record

Handoff Rules

- Completes the end-to-end workflow
- Triggers the termination / revocation process at offboarding

Key Features

Everything in scope for the GMC Site Access platform.

Multi-section registration forms

Secure document uploads

Stakeholder approvals (HCM / GMM / DMD)

Automated email & in-app notifications

Full audit logging

Role-based access control

Three configurable workflow paths

Termination / revocation workflow

Real-time status tracking

Success Criteria

1 Workflow & Visibility

Every request is trackable from start to finish.

2 Notifications

Stakeholders are alerted at each handoff.

3 Compliance & Accountability

Complete, auditable records for every action.

4 Security

Dual-layer authentication is consistently enforced.

5 End-to-End Completion

No request is ever left unresolved.

Benefits

What GMC gains from a single, digital site-access workflow.

Real-time visibility

See the status of every request across all departments instantly.

Clear accountability

Each step is owned, recorded and traceable to a person.

Reduced delays

Automated routing removes bottlenecks and idle waiting.

Stronger compliance

Consistent records support audits and regulatory needs.

Formal revocation

Access is withdrawn through a traceable, deliberate process.

IN SUMMARY

GMC Site Access turns a fragmented paper process into one secure, trackable and accountable digital workflow.

Thank You
